

AQLEEM MAKHDOOMI

Kashmir, India

Senior Technical Advisor – Modern Work & AI Services

makhdoomiaqleem@gmail.com

<https://www.linkedin.com/in/aqleemmakhdoomi/>

PROFESSIONAL SUMMARY

Senior Technical Leader with 7+ years of experience supporting and scaling enterprise collaboration platforms, including Microsoft Teams, Skype for Business, and Microsoft 365 Copilot. Proven record of improving service reliability, response SLAs, and customer satisfaction across globally distributed support operations. Operates at senior individual contributor scope, combining deep technical troubleshooting with operational leadership, cross-team influence, and data-driven performance execution. Known for stabilizing high-risk enterprise workloads under SLA pressure and restoring customer confidence during complex service incidents. Increasing focus on AI-assisted service delivery, Copilot incident resolution, and operational optimization in complex enterprise environments.

PROFESSIONAL EXPERIENCE

Microsoft

Senior Technical Advisor – Modern Work

November 2019 – Present | India

Senior individual contributor providing technical and operational leadership for global Modern Work service delivery across Americas, EMEA, APAC, and ANZ regions. Act as escalation authority for complex, high-impact incidents while influencing performance outcomes across multiple delivery teams.

Service Delivery & Operational Impact

- Improved throughput from **0.60 (FY24)** to **0.64 (FY25)** and **0.80 (FY26)** by identifying early risk signals and making data-driven prioritization and staffing trade-off decisions.
- Increased **First Week Resolution** from **38.4% to 47.2%** by introducing early-case intervention models to reduce downstream escalation churn.
- Strengthened **Initial Response SLA compliance** from **92.9% to 97.7%** by enforcing escalation governance and clarifying ownership during peak demand periods.
- Reduced overall case closure timelines while sustaining **96%+ resolution effectiveness**, balancing speed, quality, and engineer workload sustainability.
- Elevated **CSAT (5-star average)** from **4.77 to 4.85** and reduced **DSAT** from **2.9% to 1.7%** by addressing recurring customer pain points rather than isolated incidents.

Microsoft 365 Copilot – Enterprise Technical Leadership

- Serve as escalation authority for enterprise Microsoft 365 Copilot incidents, stabilizing high-impact customer environments under strict SLA commitments.
- Resolve complex Copilot failure scenarios involving grounding behavior, Microsoft Graph permissions, identity dependencies, and workload interactions.
- Identify recurring Copilot failure patterns and feed insights into service readiness guidance and operational playbooks, reducing repeat incident classes.
- Apply architectural understanding of Microsoft 365 service dependencies to drive rapid containment and sustained service continuity.

- Contribute field-driven insights to the Copilot Champs community, supporting responsible AI adoption and operational maturity.

AI-Assisted Optimization & Service Strategy

- Provided operational signals (case metadata, SLA breach indicators, escalation patterns) to AI experimentation initiatives focused on predictive closure identification and backlog risk mitigation.
- Leveraged AI-assisted analysis to proactively surface dissatisfaction trends and emerging SLA risks, enabling earlier corrective intervention.
- Integrated structured early-case review models informed by AI experimentation, resulting in improved backlog stability and faster resolution velocity.

Cross-Team Influence & Workforce Enablement

- Deliver recurring performance analytics influencing staffing alignment, shift planning, and regional delivery strategy.
- Identified capacity risks during global workload shifts, enabling proactive stabilization and workload redistribution.
- Designed and executed structured triage and escalation frameworks to address inconsistent ownership across regions, improving accountability and execution consistency.
- Supported customer segmentation and hypercare planning for high-value enterprise accounts.

Teamware Solutions (Microsoft Vendor)

Support Engineer – Unified Communications

July 2018 – November 2019 | India

- Delivered enterprise support for Microsoft Lync and Skype for Business across hybrid and on-premises environments.
- Performed protocol-level troubleshooting using SIP traces, VoIP diagnostics, network analysis, and authentication workflows.
- Supported high-severity incidents in collaboration with Microsoft escalation engineering teams, ensuring service restoration under SLA constraints.

LEADERSHIP EXPERIENCE

Aspiring People Manager (APM) Internship – Microsoft

2025 – Present

- Selected for a competitive leadership development program preparing senior individual contributors for formal people management roles.
 - Participate in applied leadership rotations covering performance management, coaching, conflict navigation, recruitment, and business acumen.
 - Conduct structured behavioral and technical interviews for FTE and contract roles, directly influencing hiring decisions and team composition.
 - Mentor engineers through readiness programs and performance coaching aligned with delivery KPIs and growth plans.
 - Apply situational leadership and feedback frameworks within active delivery environments.
-

CERTIFICATIONS & RECOGNITION

- Microsoft Certified: **AI Transformation Leader**
- Microsoft Certified: **AI Business Professional**
- Microsoft 365 Certified: **Copilot and Agent Administration**
- Microsoft Certified: **Azure AI Engineer Associate**
- Microsoft Certified: **Azure AI Fundamentals**
- Microsoft Certified Trainer (MCT)
- Microsoft Certified: **Security, Compliance, and Identity Fundamentals**
- Microsoft Certified: **Power Platform Fundamentals**
- **Multiple Microsoft Hackathon Award Winner**

EDUCATION

Bachelor of Technology (B.Tech)

Computer Science and Engineering

BGSB University, Jammu
